

Potassium Thiosulfate 0-0-25

APPLICATION RECOMMENDATIONS

Potassium Thiosulfate is effective as a direct foliar application or fertigation type product. May be tank mixed or injected with most other fertilizers or agricultural chemicals after conducting a jar test for compatibility. Always treat a small test area with any experimental blends to determine potential phytotoxicity before making general applications.

TURF SPRAY APPLICATION: Apply 3 to 12 oz of Potassium Thiosulfate per 1,000 sq ft every 7 to 14 days in at least 1 gallon of water. Apply only as directed.

CAUTION (Application)

- Strongly acidic and/or weak chelates do not blend well with Potassium Thiosulfate. Blends of Potassium Thiosulfate should not be acidified below a pH of 6.0.
- Potassium reacts with nitrate to form KNO₃ crystals. If this should happen, the addition of water and/or heat should bring it back to a clear solution.
- When mixing Potassium Thiosulfate with pesticides always keep agitators running during filling and spraying operations. Failure to maintain agitation may cause separation of products resulting in uneven spray application.
- Do not apply to foliage of any crop when temperatures are above 90° F. Apply early morning or late evening.

LIMITATIONS OF WARRANTY AND LIABILITY

Seller warrants only that this product conforms to the chemical description on the product label. No other warranty, express or implied, as to the merchantability, fitness for a particular use, or otherwise shall apply. Purchaser's exclusive remedy for loss or damage related to the purchase and/or use of this product shall be limited to the refund of the purchase price, only. By using this product, you are deemed to have accepted the terms of this notice.
